# 1. Command Line Structure

Memento is a multi-mode application program that can be invoked using a command line.

```
memento [COMMAND] ... [OPTIONS]
memento gui [OPTIONS] [FILE]
memento config [OPTIONS] [FILE]
memento view [OPTIONS] [FILE]
memento dump [OPTIONS] [FILE]
memento xperf [OPTIONS]
```

The command line may include:

- 0 or 1 COMMAND argument: gui, config, view, dump, xperf
- 0 or more OPTION flags
- 0 or 1 FILE argument

## 2. COMMAND

The COMMAND argument determines the operation mode of the Memento application.

Command	Description
gui	<p>Start Memento Graphical User Interface</p> <p><i>This single-window graphical user interface application allows to:</i></p> <ul style="list-style-type: none"> <li>● <i>Show/change the Memento Configuration</i></li> <li>● <i>Monitor graphically the input activity of the Memento Ring Buffer</i></li> <li>● <i>View a selected set of messages of the Memento Ring Buffer</i></li> <li>● <i>Control interactively the selection of messages to display</i></li> <li>● <i>Dump the Memento Ring Buffer data to disk</i></li> </ul>
config	<p>Show/change Memento Configuration</p> <p><i>Select this mode to show and possibly modify the Memento configuration using a command line.</i></p>
view	<p>View Memento messages</p> <p><i>Select this mode to view a selected set of messages of the Memento Ring Buffer using a command line.</i></p>
dump	<p>Dump Memento data into file</p> <p><i>Select this mode to dump Memento data from the Memento Ring Buffer to files on disk using a command line.</i></p>
xperf	<p>Record Memento and XPerf data into file</p> <p><i>Select this mode to record Memento and XPerf data to a disk file using a command line.</i></p>

The COMMAND argument is optional. When it is omitted, a default operation mode is selected:

- gui for Windows
- view for Linux

# 3. OPTIONS

## 3.1. Common Options

Option flags applicable to all COMMAND values

Flag	Description
<code>-h</code> or <code>--help</code>	Display the help message
<code>-V</code> or <code>--version</code>	Display the version information
<code>--numeric-version</code>	Display just the version number

## 3.2. GUI Options

Option flags applicable when `COMMAND=gui` or when, for Windows only, the `COMMAND` argument is missing

Flag	Description
<code>--dir=DIR</code>	Path to the trace definition directory. Default directory : <code>Public Documents\Euresys\Memento</code>
<code>--goback [=N]</code>	Go back N messages in history. Default: ignore past messages.
<code>--limit [=N]</code>	Stop after N messages. Default: don't stop.
<code>--pastboot [=N]</code>	Go back N boot sessions in history. Default: ignore past boot sessions.
<code>--verbosity=LEVEL</code>	Set the verbosity level. Possible values: <code>None, Critical, Error, Warning, Notice, Info, Debug, Verbose</code> Default: <code>Notice</code> .
<code>--history=INT</code>	Number of history lines. Default number: 250,000.

Flag	Description
--duration=SEC	Stop the application after the specified number of seconds.
--hide-console	Don't show the application console.
--filter=FILTER	<p>Define filters with the following BNF syntax:</p> <pre>&lt;FILTER&gt; ::= &lt;CARD&gt;   ':'&lt;CONNECTORS&gt;   &lt;CARD&gt;' ':'&lt;CONNECTORS&gt;</pre> <p>where</p> <pre>&lt;CARD&gt; ::= &lt;INTEGER&gt;   '+', &lt;CONNECTORS&gt; ::= &lt;LETTER&gt;   &lt;LETTER&gt;&lt;CONNECTORS&gt;   '+', &lt;LETTER&gt; ::= 'A'   'B'   'C'   'D'</pre> <p>with '+' to match empty card or connector information</p>

## 3.3. Config Options

Option flags applicable when COMMAND=config

Flag	Description
--reset	Reset the Memento Configuration to default settings. <i>This is performed before any other cation!</i>
--verbosity=LEVEL	<p>Set the verbosity level.</p> <p>Possible values: None, Critical, Error, Warning, Notice, Info, Debug, Verbose</p> <p>Default: Notice.</p>
--kind=KIND	Show/change configuration of one of the following kind: API, Acquisition, CoaXPress, DMA, DPC, Descriptors, EEPROM, Event, FPGA, Flash, GenAPI, Hardware, I2C, IOCTL, IRQ, Memento, OperationM, PCIeExpress, PnP, Power, Profiling, SPI, Script, Serial Line, Thread, Unknown, User
--header	Show Memento header including main and kind configurations.

## 3.4. View Options

Option flags applicable when COMMAND=view or when, for Linux only, the COMMAND argument is missing

Flag	Description
--dir=DIR	Path to the trace definition directory. Default directory :Public Documents\Euresys\Memento
--goback[=N]	Go back N messages in history. By default, past messages are ignored.
--limit[=N]	Stop after N messages. Default: don't stop.
--pastboot[=N]	Go back N boot sessions in history. Default: ignore past boot sessions.
--verbosity=LEVEL	Set the verbosity level. Possible values: None,Critical,Error,Warning,Notice,Info,Debug,Verbose Default: Notice.
--color	Enable or disable colors. Default: automatic detection.
--latency=L	Chronologically sort traces using a sliding window of L seconds. Default: 0.5 second.
--buffering=B	Limit internal buffering of traces to B seconds. Default: 0.6 second.
--filter=FILTER	Define filters with the following BNF syntax: $\begin{aligned} <\text{FILTER}> ::= & \quad <\text{CARD}> \mid ':'<\text{CONNECTORS}> \mid \\ & <\text{CARD}>' : '<\text{CONNECTORS}> \end{aligned}$ <p>where</p> $\begin{aligned} <\text{CARD}> ::= & \quad <\text{INTEGER}> \mid '+' , <\text{CONNECTORS}> ::= <\text{LETTER}> \mid \\ & <\text{LETTER}><\text{CONNECTORS}> \mid '+' , <\text{LETTER}> ::= 'A' \mid 'B' \mid 'C' \mid 'D' \end{aligned}$ <p>with '+' to match empty card or connector information</p>

## 3.5. Dump Options

Option flags applicable when COMMAND=dump

Flag	Description
-o --output=FILE	Output file name. Existing files are rotated if necessary. Default: memento.out.
--goback [=N]	Go back N messages in history. Default: ignore past messages.
--pastboot [=N]	Go back N boot sessions in history. Default: ignore past boot sessions.
--split [=MB]	Split dump into several files, rotating files as necessary. Default: dump all messages to a single file.
--keep=N	Keep the N most recent dump files and delete the others. Default: keep all files.
--follow	Wait for new messages

## 3.6. Xperf Options

Option flags applicable when COMMAND=xperf

Flag	Description
-o --output=FILE	Output file name. Existing files are rotated if necessary. Default: memento-xperf.zip.
--keep=N	Keep the N most recent dump files and delete the others. Default: keep all files.
--duration=SEC	Stop the application after the specified number of seconds
--group=GROUP FLAGS	XPerf group or flags Default: DiagEasy
--show-in-explorer	Show memento-xperf archive in Windows Explorer
--pause-on-error	

## 4. FILE

The FILE argument specifies the file name and the file path of a Memento dump file.

The FILE argument is optional. It is required only when the COMMAND has to be executed on an existing dump file.

When it is omitted, the COMMAND is executed on the Memento Ring.

# 5. Samples

Starts the Memento Graphical User Interface

```
memento gui --hide-console
```

Reset Memento to Default Verbosity Level

```
memento config --reset
```

Set Memento to Highest Verbosity Level

```
memento config --reset --verbosity=verbose
```

Start Memento Logging

```
memento --goback --follow --split=100 --keep=20
```

Record Memento and XPerf traces

```
memento xperf  
--output="%USERPROFILE%\memento\memento-xperf.zip"  
--keep=20 --show-in-explorer
```
